

Working closely in the field with Occupational Therapists, Care Necessities carry out joint visits with OT's. We help to assess moving and handling and bathing solutions for many complex conditions, ensuring that we supply products to suit the individuals needs and requirements.

Through our field work we have learnt that MND sufferers have fears and anxieties of using standard shower commode chairs for the fear of falling forwards and lack of body support.

This modular gas action Tilt in Space Shower Commode chair is ideal for most complex medical conditions, but for MND sufferers it offers the tilt option giving reassurance.

Being a modular chair it comes with head and foot rests as standard, but can be added to as and when additional support is required.

Additional extras available:

- Safety bar that hooks over the arm rest in front of the user to give them reassurance and something to hold onto.
- Side lateral supports to help maintain posture support to each side
- Lap belt and chest belts
- Lift up arms to assist with side transfers and hoisting
- Lockable arms to prevent arms being lifted when tilted
- Extra soft seat for those who may need to be sat for a period of time
- Height adjustable to maintain smooth transfers or fitting over a range of toilet heights
